Hamann WebApps User Manual

Hamann distinguishes itself from other companies by its personal service towards clients. One of these distinctions are the Hamann WebApps. Using these WebApps, you can introduce price requests online and let them be calculated by the system. You can turn these requests into orders, but it's also possible to introduce new orders in a fast and more efficient way. Moreover, you are also able to follow your shipments, consult transport documents, turn to a real-time overview of your goods stored in our warehouse and report incoming trucks to assure a fast process in our cross dock warehouse.

You can find the WebApps through our website www.hamann.be. There you select the tab above "E-services" and you will be forwarded to the homepage of the WebApps.

To make use of the Hamann WebApps the **Silverlight 5** plugin is required. If necessary the plugin can be downloaded for free at the Microsoft website. Old versions need to be upgraded to version 5. If not the system hangs at "loading 100%".

Silverlight plugin installed: 5.1.20513.0

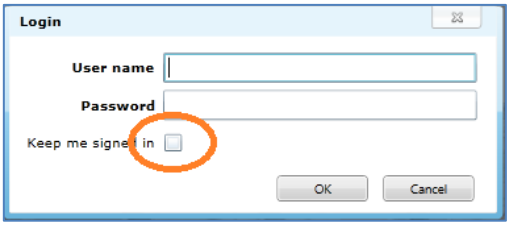
About
LOGIN
Welcome to Hamann WebApps!
As an authenticated user you are able to create new orders,
track and trace your current orders,
download related documents,
check and export your real time stock in one of our warehouses
and reserve unloading slots for your import transportations.
As from 2014 you are able to calculate spot prices online, in real time!
Hamann 2013 - test version 5.20140121.10

The Hamann WebApps contain the following applications:

- Spot Prices
- Order Entry
- Track & Trace
- Stock Overview
- Unloading Slots

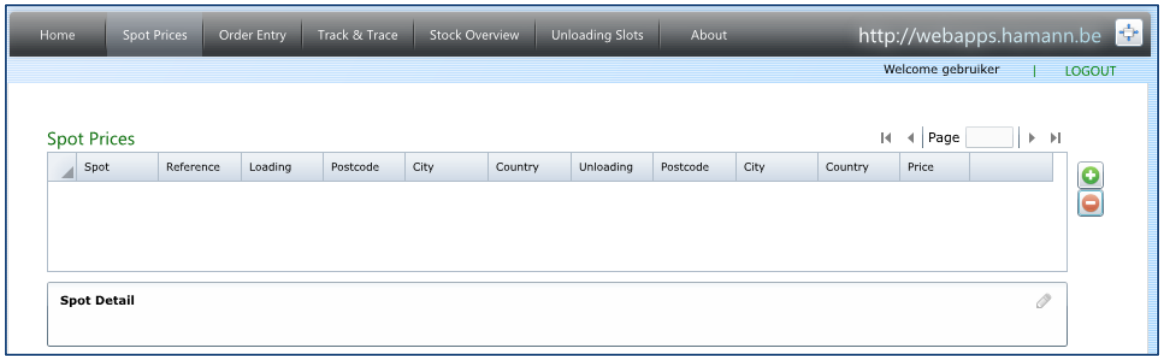
By clicking on one of these tabs, a pop-up will appear where you can fill out your login details. If required you can save your password on your computer for later.



2. Spot Prices

REQUEST

By clicking on "Spot Prices", the next page appears.



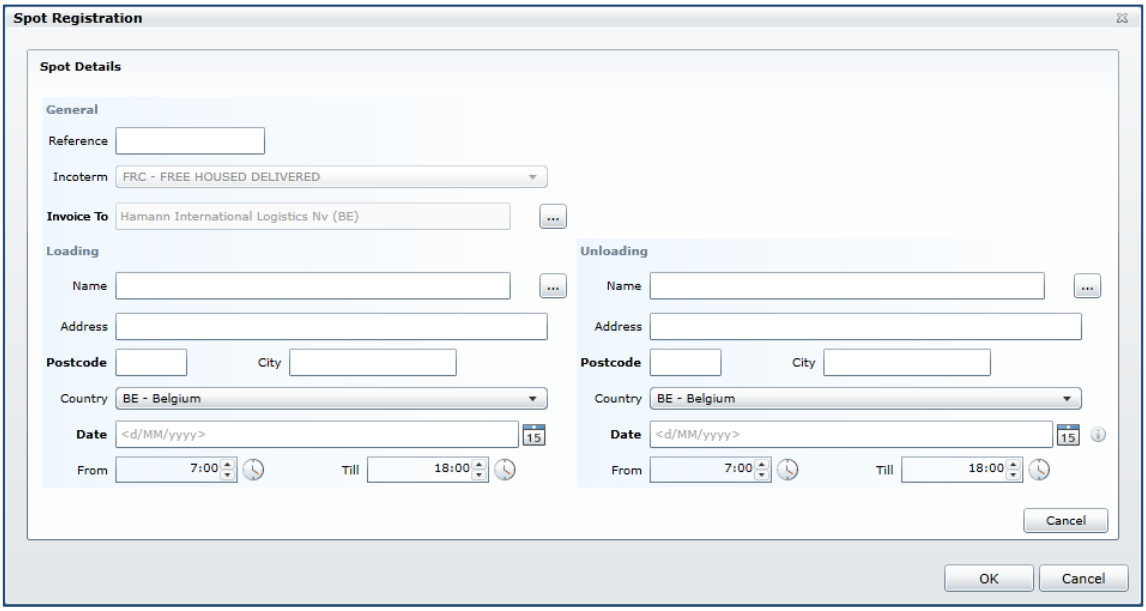
When you start this application for the first time, and you have not yet entered orders, the lists are empty. When you have already entered a spot price, but have not yet sent it to us, you will see it in the upper list. When spot prices are selected in the upper list, the goods details appear in the list below.

To enter a price request, just click on the green plus button with the yellow glow in the upper right corner. To remove a selected order you just click the red minus.
Thus you are able to enter your own requests and send them to us whenever you want, 24 hours a day and 7 days a week.

Add a price request

Remove a selected price request

When you add a price request, the following screen appears where you need to fill out all the details of the price request.



On this page you are able to fill out all the order details to get a correct price request. The fields in bold are necessary information:

- **Invoice To**: when your company has multiple departments, you have the possibility to select the invoice department. With an EXW incoterm this choice expires. Only departments, already known as customer at Hamann, can be indicated here.

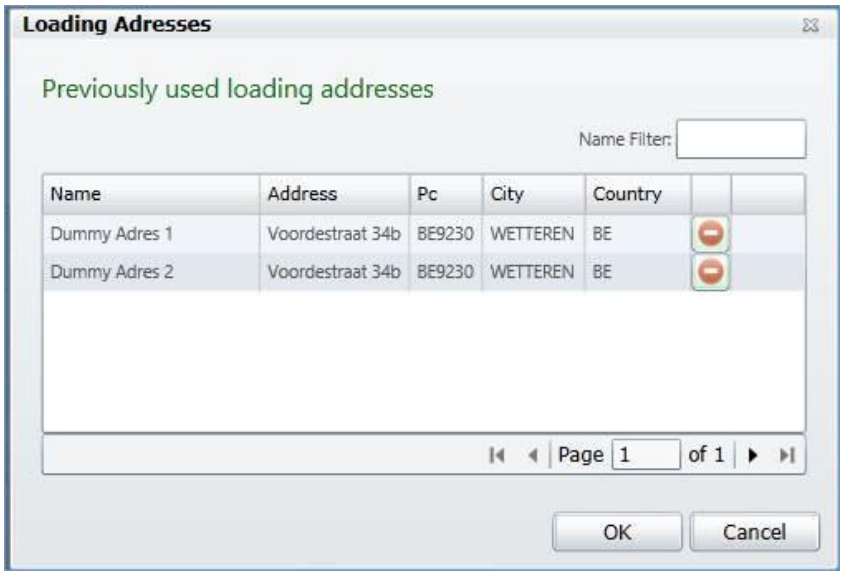
- Reference: here you can enter an order reference as required.

- **Incoterm**: price requests are supposed to be incoterm FRC. For deliveries in BE you can also select EXW.

- **Loading**[1]: here you can enter the address details of the loading place. When you enter the address for the first time, all the details have to be entered step by step. When you use this address the next time, you can pick up the details by clicking on the selection button ... next to it. You will get a list of early used addresses. Automatically, the last time window (opening hours) and remarks will be used. When the list becomes too long, you have

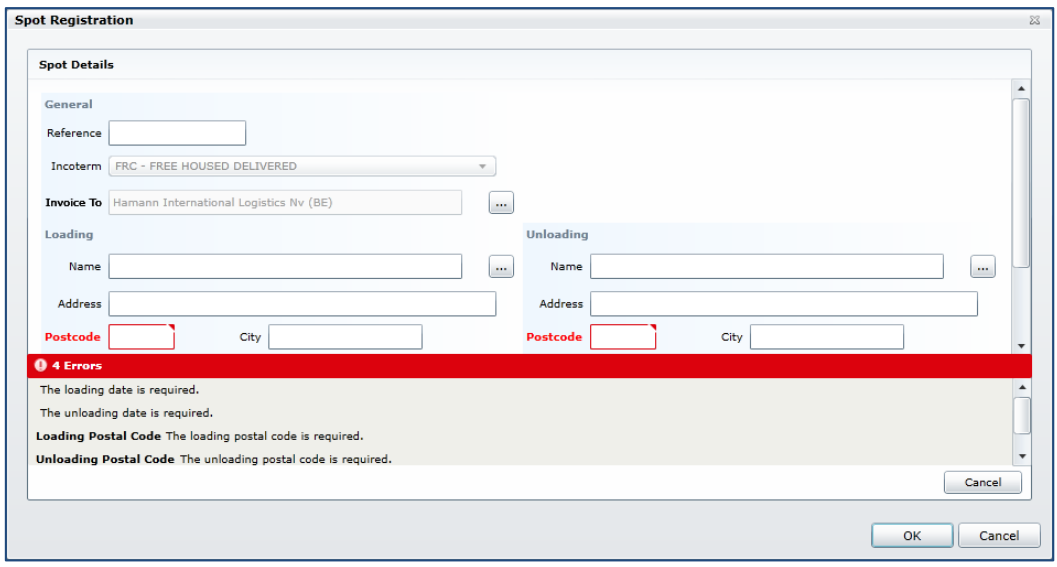
[1] If load date < 24hrs, manual confirmation is needed and this may cause some delay.
Price requests where services as cod/fix deliveries/weekend- loading or unloading/ exceptional dimensions or weight/ loading within 24hrs/ will be first forwarded intern. Because of this, the price request may be delayed for maximum 1 hour. For similar requests during the weekend the request will be treated the first following hour of the next working day.
Pay attention, when the actual loading date is exceeded, the request will disappear from the overview.

the possibility to delete some addresses by standing on the address and clicking on the : "remove address from list...".



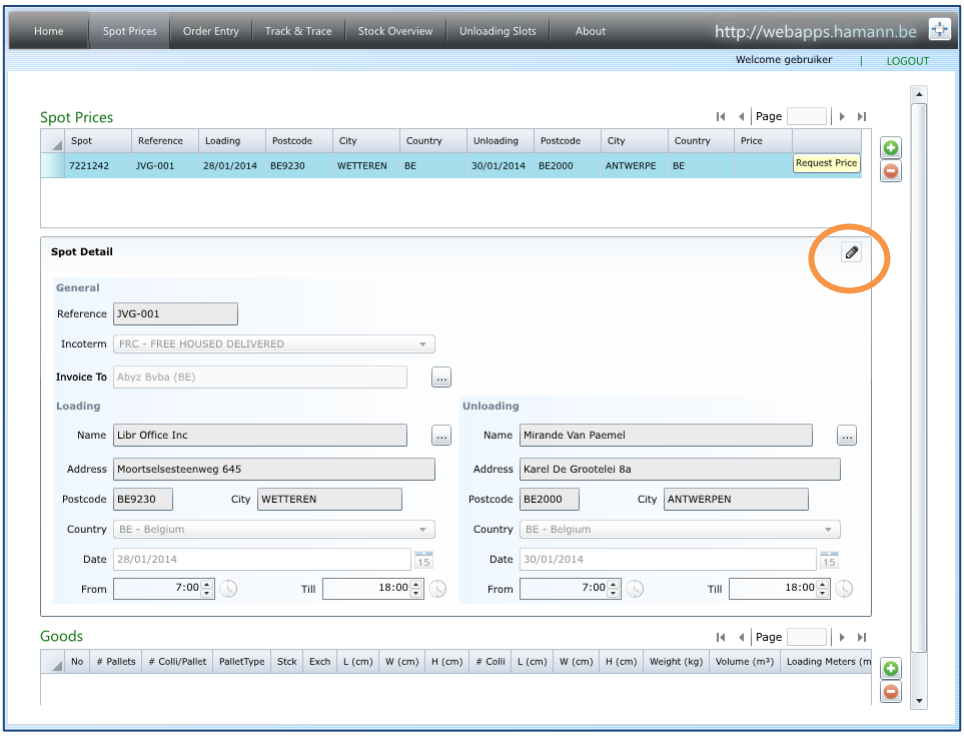
- **Unloading**: same principle as for the loading

After entering your details, you just click the OK button. Certain fields will be considered as necessary. When you forgot to fill in one of these fields, or they do not fit logically, an automatic error will appear.



When everything is filled out correctly, a new price request will appear in the survey of the spot prices above. The application will automatically navigate to the goods details where you can add the goods details.

A price request that not yet has been sent, is always adjustable by clicking on the edit pencil or by double clicking on the order line in the upper list.



Adjust a price request

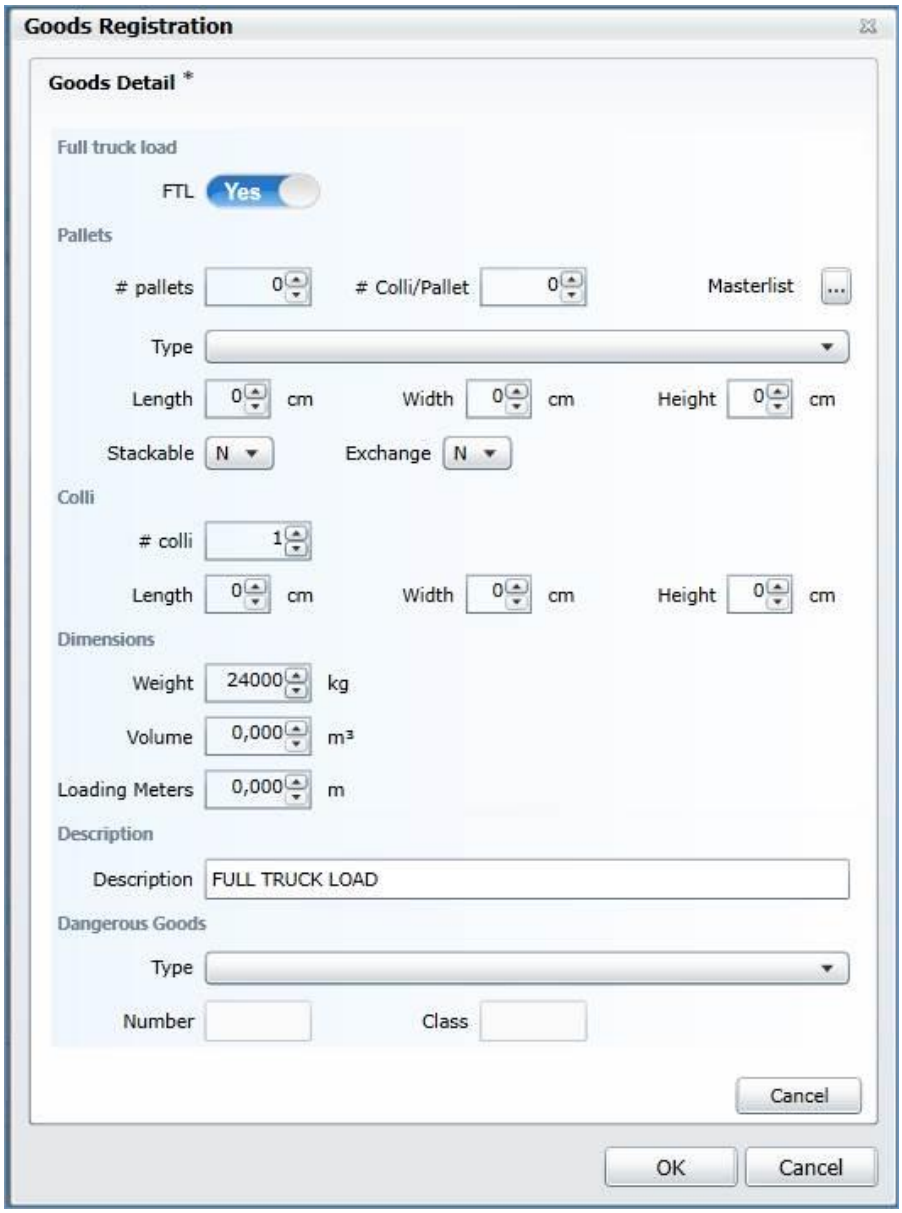
GOODS

Just like adding a price request, you can fill out the goods details by clicking on the green plus button.

Add a new goods line

Remove a selected goods line

The next window will appear:



The following details need to be defined:

- **#pallets**: number of pallets

- **#colli/pallet**: number of colli per pallet

- **Type**: here you have the possibility to indicate the pallet type. The standard sizes are automatically filled in (euro or block pallet). The height can always be overruled.

  There is also the opportunity to insert measures of non-standard pallets. In that case, length, as well as width and height are adjustable.

- **Stackable**[2]: here you can indicate whether the pallets are mutual stackable or stackable with other goods. We assume by default these are not stackable.

- **Exchange**: this is only relevant for euro pallets, when empty euro pallets need to be exchanged. Attention: this is not possible for each country.

- **#colli**: number of goods (not stored on a pallet)

- **Dimensions**: here you can insert the weight, volume and/or number of loading meters. Weight and volume are anyhow obligatory fields. We calculate ourselves the volume that can be adjusted as required.

- **Description**: here you have the possibility to give a description of your goods.

- **Dangerous Goods**[3]: in case the goods are dangerous, you need to select the right information here.

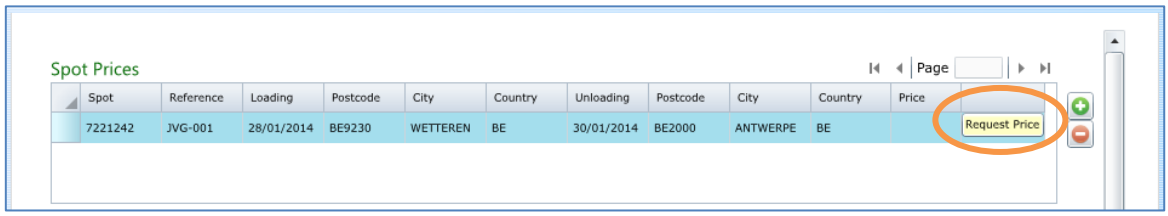
Additional goods lines can be entered. Existing goods lines can always be adjusted by double clicking the line. Obviously you can also remove a good line as required.

Automotive clients have the possibility to select a predefined type of material via the "Masterlist". You need to select one of the material types from the list. If necessary you can filter on the ID-number.

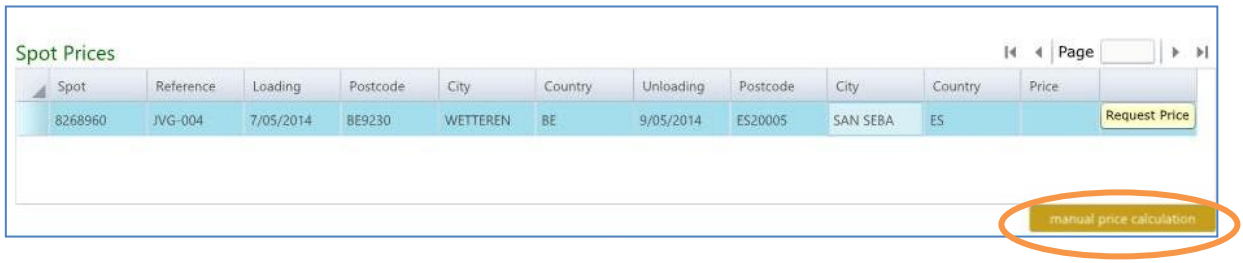
[2] Price requests where services as pallet exchange will be first forwarded intern. Because of this, the price request may be delayed for maximum 1 hour. For similar requests during the weekend the request will be treated the first following hour of the next working day.
[3] Cfr. Footnote 2.

REQUEST A PRICE

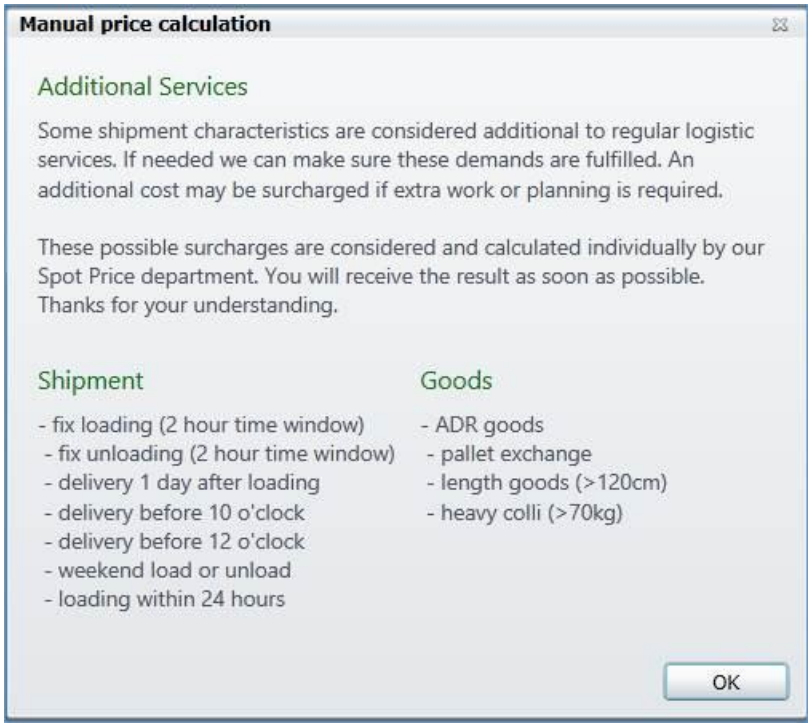
When you filled out your details, you can request a price by clicking on "Request Price".



When certain fields do not fit the normal conditions, a remark in golden yellow will appear "Added Value Services detected".

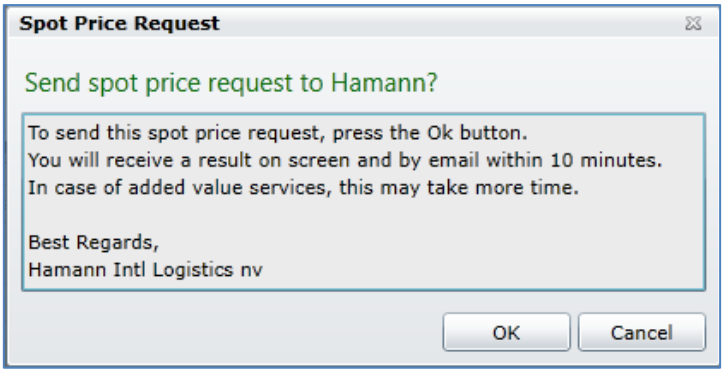


By clicking on this remark, the next dialog box will appear with an explanation:



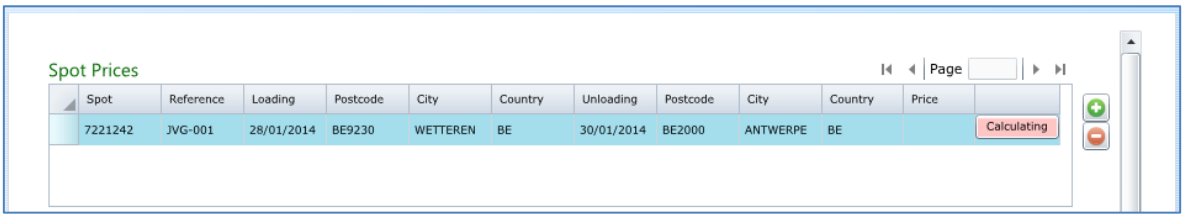
Manual price calculation
Additional Services
Some shipment characteristics are considered additional to regular logistic services. If needed we can make sure these demands are fulfilled. An additional cost may be surcharged if extra work or planning is required.
These possible surcharges are considered and calculated individually by our Spot Price department. You will receive the result as soon as possible. Thanks for your understanding.
Shipment
- fix loading (2 hour time window)
- fix unloading (2 hour time window)
- delivery 1 day after loading
- delivery before 10 o'clock
- delivery before 12 o'clock
- weekend load or unload
- loading within 24 hours
Goods
- ADR goods
- pallet exchange
- length goods (>120cm)
- heavy colli (>70kg)
OK

You can click "OK" and request a price. There will appear an extra confirmation window where you also need to click "OK" to send the price request.



Spot Price Request
Send spot price request to Hamann?
To send this spot price request, press the Ok button.
You will receive a result on screen and by email within 10 minutes.
In case of added value services, this may take more time.
Best Regards,
Hamann Intl Logistics nv
OK
Cancel

Now you are on the page with an overview of the "Spot Prices". In red you can see that the price is being calculated.



When the price is calculated, you will receive a PDF file with all the details :

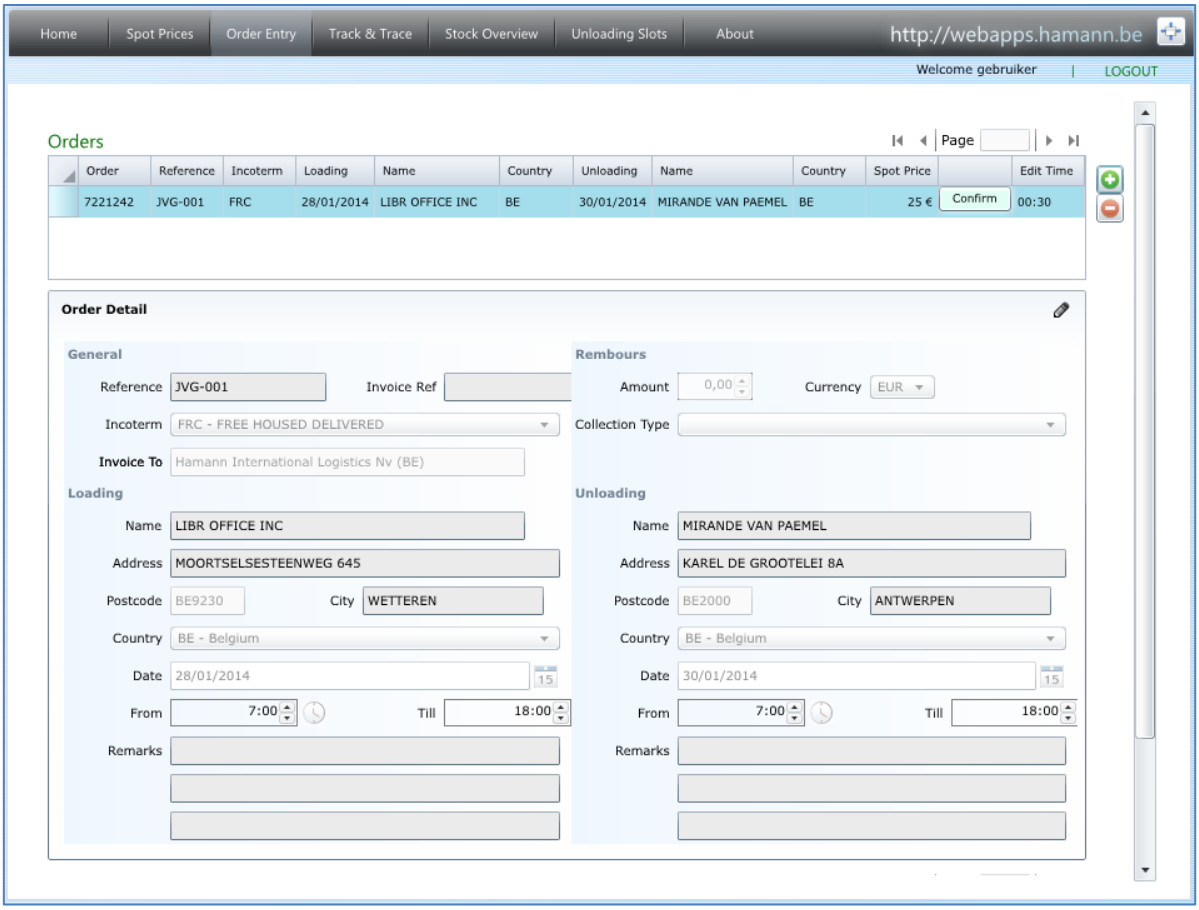
Hamann Intl Logistics nv
OK
Cancel

As soon as you have confirmed by clicking "OK", an order will be sent to "Order Entry" within the WebApps. There you have a possibility to adjust certain details such as the name of the street, before booking the order[5]. (cfr. Order Entry – Confirm – p. 21)

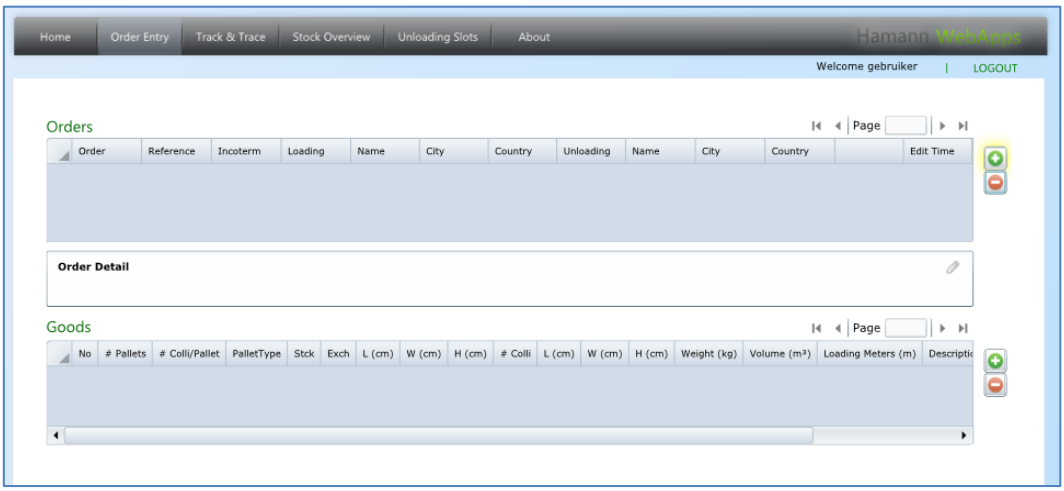


[5] Requested fields for Order Entry are more extensive (e.g. complete load- and unloading details), everything that has been mentioned in the Spot Prices will be copied.

3. Order Entry

ORDER

By clicking Order Entry the following page appears.



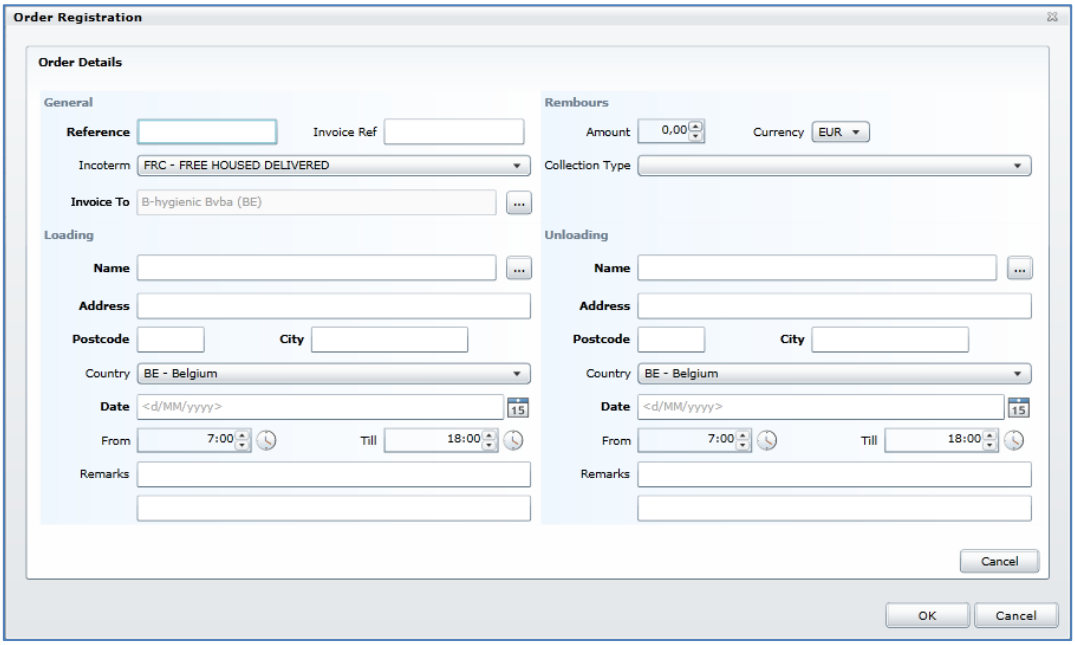
When you start this application for the first time, and you have not yet entered orders, the lists are empty. When you have already entered orders, but not yet sent them to us, you will see them in the upper list. When orders are selected in the upper list, the goods details appear in the list below.

To enter an order, just click the green plus with the yellow glow in the upper right corner. To remove a selected order you just click the red minus.
Thus you are able to enter your own orders and send them to us whenever you want, 24 hours a day and 7 days a week.

Add an order

Remove a selected order

When you add an order the following window appears.



In this window, you can fill out all your sending details:

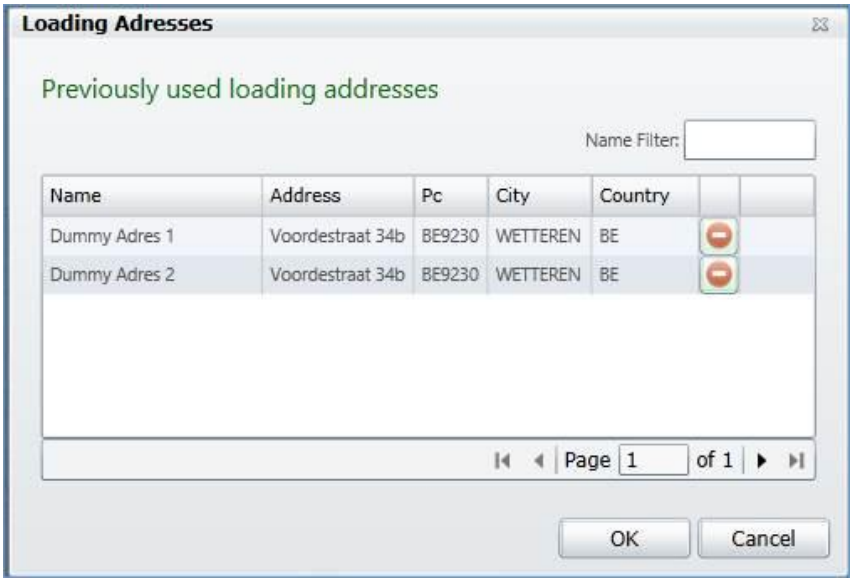
- **Reference**: here you can enter an order reference as required.

- **Invoice ref**: you can freely fill in a second reference, which one will figure on the invoice.

- **Incoterm**: here you can enter the right incoterm, this is FRC or EXW. The default is FRC.

- **Invoice to**: when your company has multiple departments, you have the possibility to select the invoice department. With an EXW incoterm this choice expires. Only departments, already known as customer at Hamann, can be indicated here.

- **Loading**: here you can enter the address details of the loading place. When you enter the address for the first time, all the details have to be entered step by step. When you use this address the next time, you can pick up the details by clicking on the selection button next to it. You will get a list of early used addresses. Automatically, the last time window (opening hours) and remarks will be used. When the list becomes too long and you want to remove some addresses, you need to select the address and click on the : "Remove address from list..." .

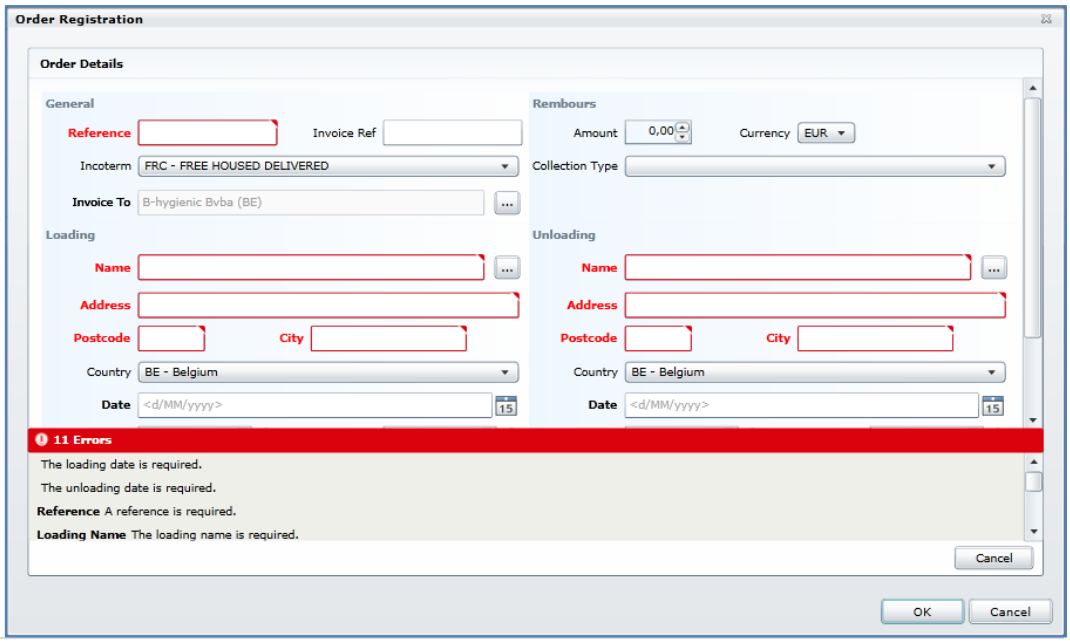


- **Remarks**: here you have the possibility to enter additional information (e.g. a telephone number or extra points of interest such as closing hours at noon).

- **Rembours**: when an order must be delivered "cash on delivery", you can define the amount and method of payment (cash, cheque). For this additional service, a little surcharge will be invoiced.

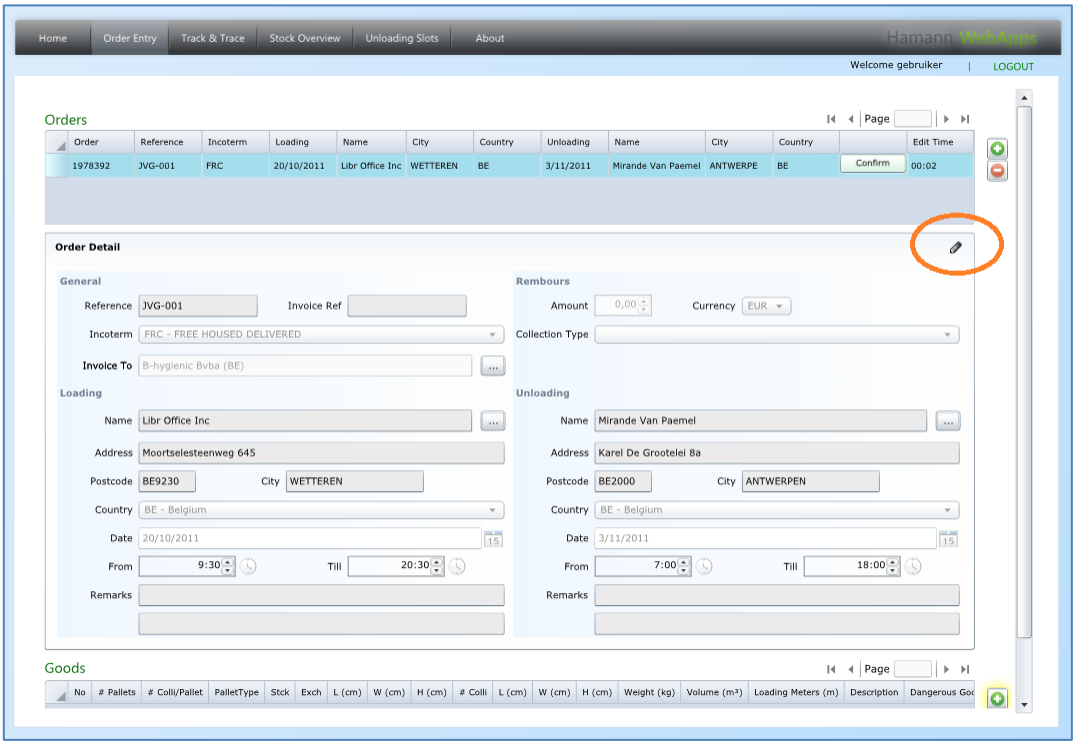
- **Unloading**: same principle as for the loading

After entering your details, you just click the OK button. Certain fields will be considered as necessary. When you forgot to fill in one of these fields, or they do not fit logically, an automatic error window will appear.



When everything is filled in correctly, a new order line will appear in the order list above and the application will navigate automatically to the goods details part where you can add goods lines.

You can always adjust orders that have not been sent yet, by clicking on the edit pencil or by double clicking an order line in the list above.



Adjust an order

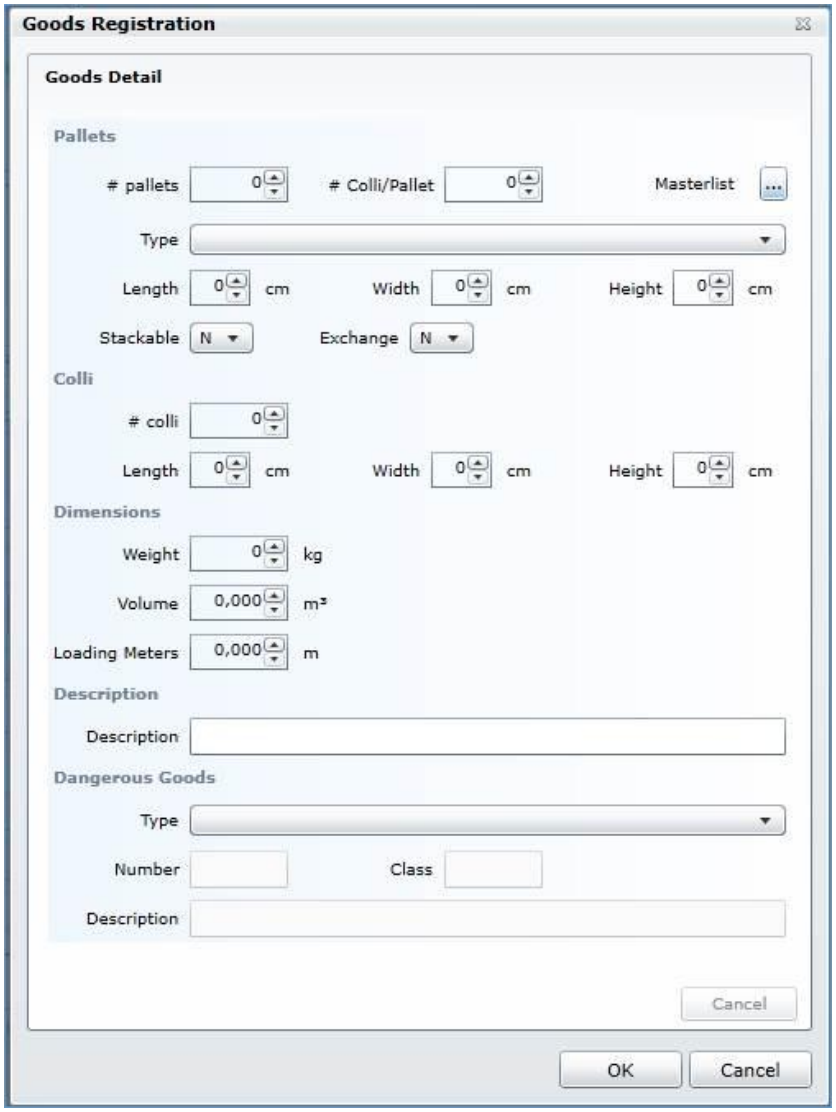
GOODS

Just like adding new orders, you can click the green plus button to add goods lines.

Add a new goods line

Remove a selected goods line

The next window will appear:



The following details need to be defined:

- **#pallets**: number of pallets

- **#colli/pallet**: number of colli per pallet

- **Type**: here you have the possibility to indicate the pallet type. The standard sizes are automatically filled in (euro or block pallet). The height can always be overruled.

  There is also the opportunity to insert measures of non-standard pallets. In that case, length, as well as width and height are adjustable.

- **Stackable**: here you can indicate whether the pallets are mutual stackable or stackable with other goods. We assume by default these are not stackable.

- **Exchange**: this is only relevant for euro pallets, when empty euro pallets need to be exchanged. Attention: this is not possible for each country.

- **#colli**: number of goods (not stored on a pallet)

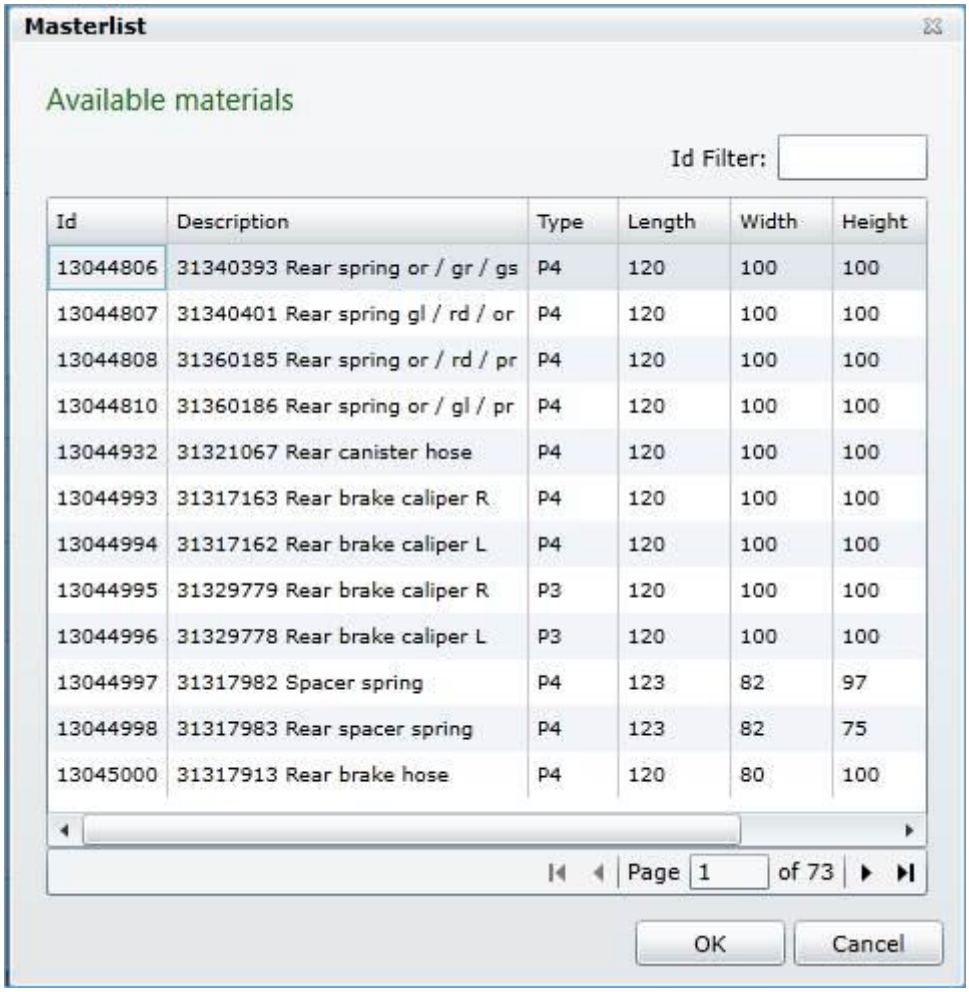
- **Dimensions**: here you can insert the weight, volume and/or number of loading meters. Weight and volume are anyhow obligatory fields. We calculate ourselves the volume that can be adjusted as required.

- **Description**: here you have the possibility to give a description of your goods.

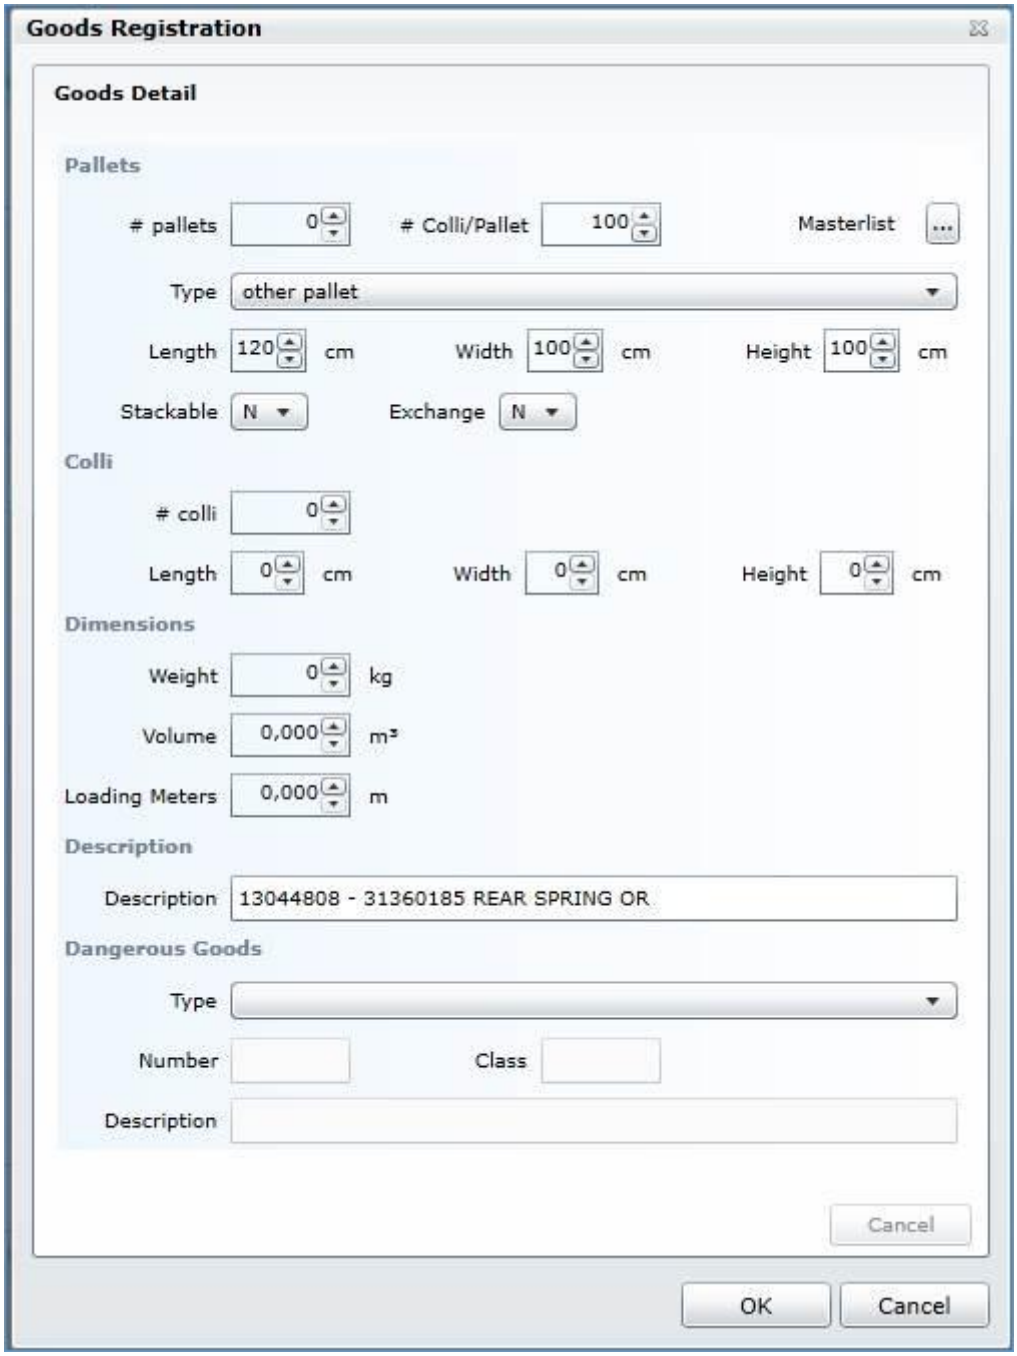
- **Dangerous Goods**: in case the goods are dangerous, you need to select the right information here.

Additional goods lines can be entered. Existing goods lines can always be adjusted by double clicking the line. Obviously you can also remove a good line as required.

Automotive clients have the possibility to select a predefined type of material via the "Masterlist". You need to select one of the material types from the list. If necessary you can filter on the ID-number.



As soon as the material type has been selected, the data will be copied to the detailed window of the goods. Things such as pallet type, dimensions and description will already be filled in.

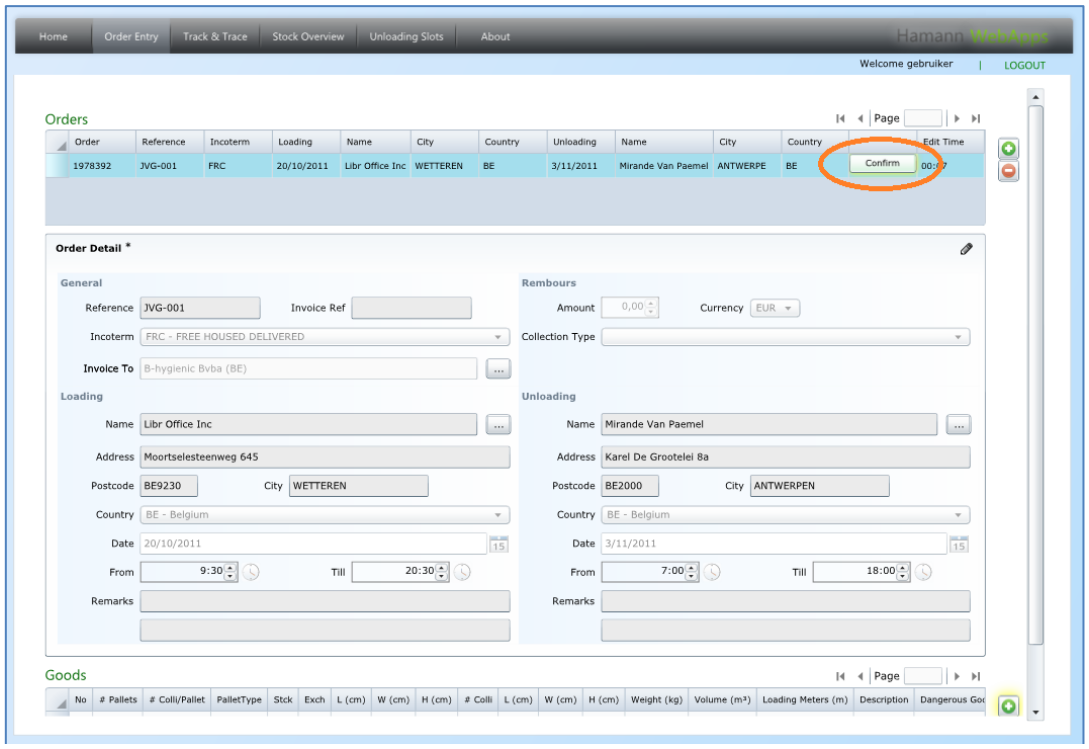


When everything is filled in, you return to the main window where you can add, adjust or remove goods and/or order lines.

CONFIRM

You don't need to confirm your order and send it us immediately; you can also wait a few days until you have collected more orders. When you decide your order may be executed by Hamann, you need to confirm this by clicking the CONFIRM-button in the order line.

Confirm an order



Order Confirmation
Send order to Hamann?
To confirm this order, press the Ok button.
You will receive an order confirmation by email within 10 minutes.
Best Regards,
Hamann Intl Logistics nv
OK
Cancel

By confirming your order, it is sent to us. You will receive a confirmation by e-mail within 10 minutes. The order will disappear from the order overview.

Your e-mail contains the order.

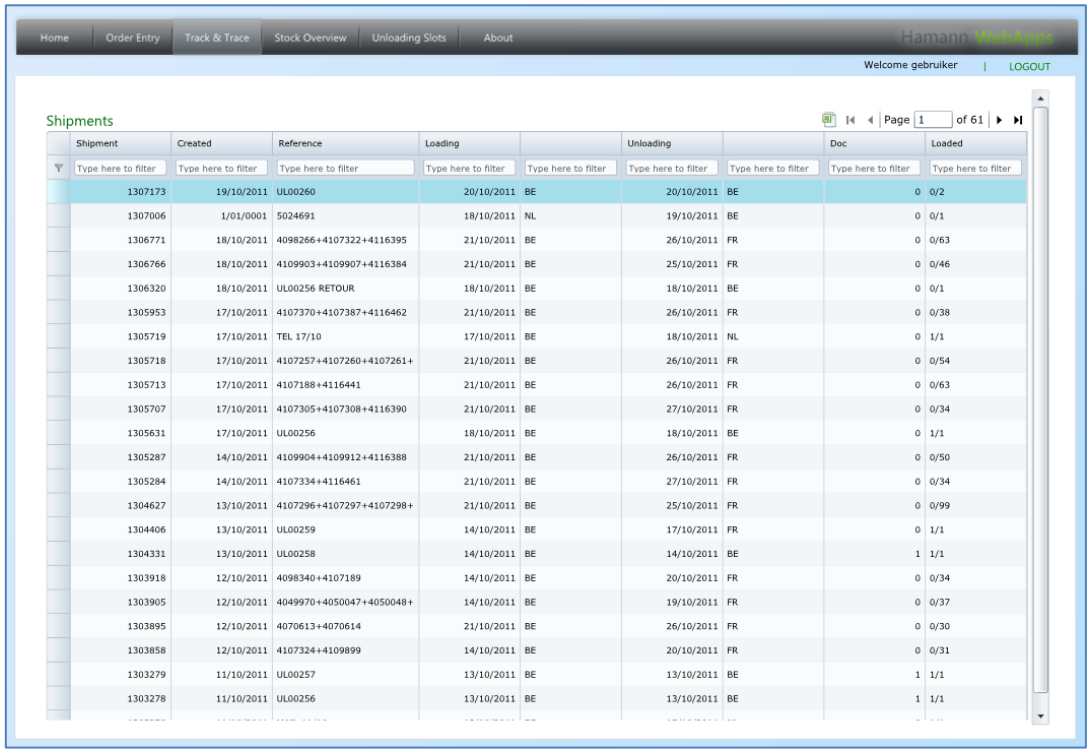
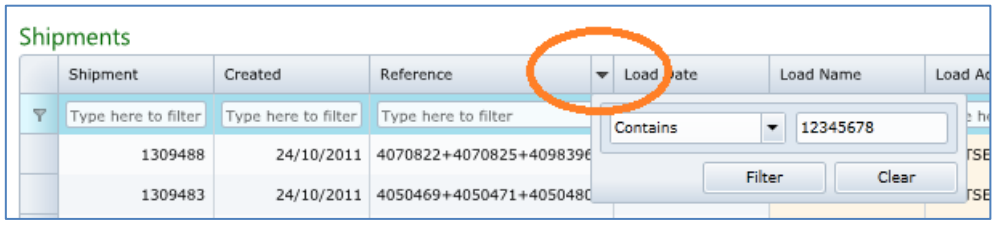
4. Track & Trace

Trough the Track & Trace application, you have the possibility to follow up your shipments. When you start the application, you see a list of your current orders.



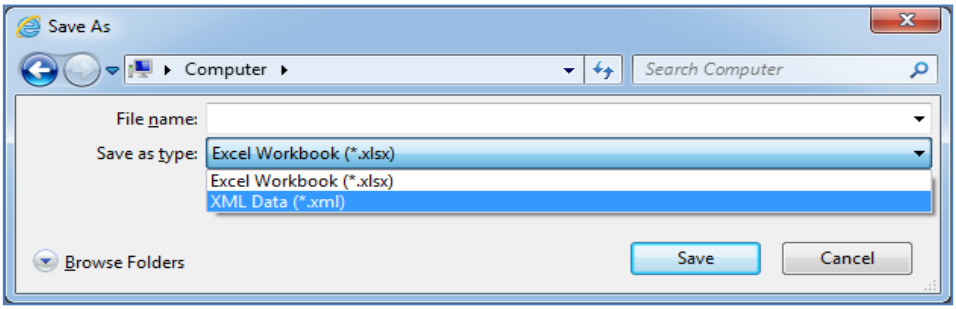
You can easily filter and sort out your orders so that you can immediately see the orders you need.



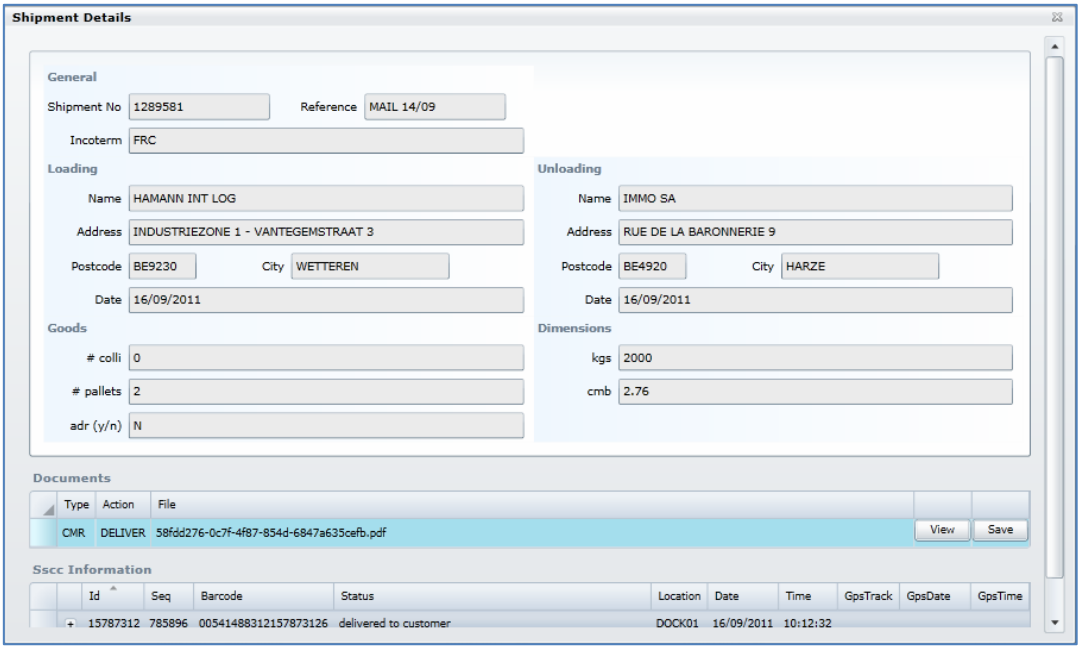
Furthermore, you can visualize extra columns so you can directly see all the details of the shipment.

Export to Excel/Xml

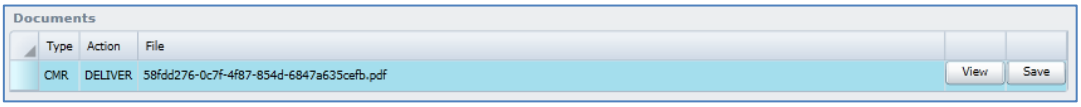
In addition, you have the possibility to export to an Excel or Xml file and import these into your own software environment.

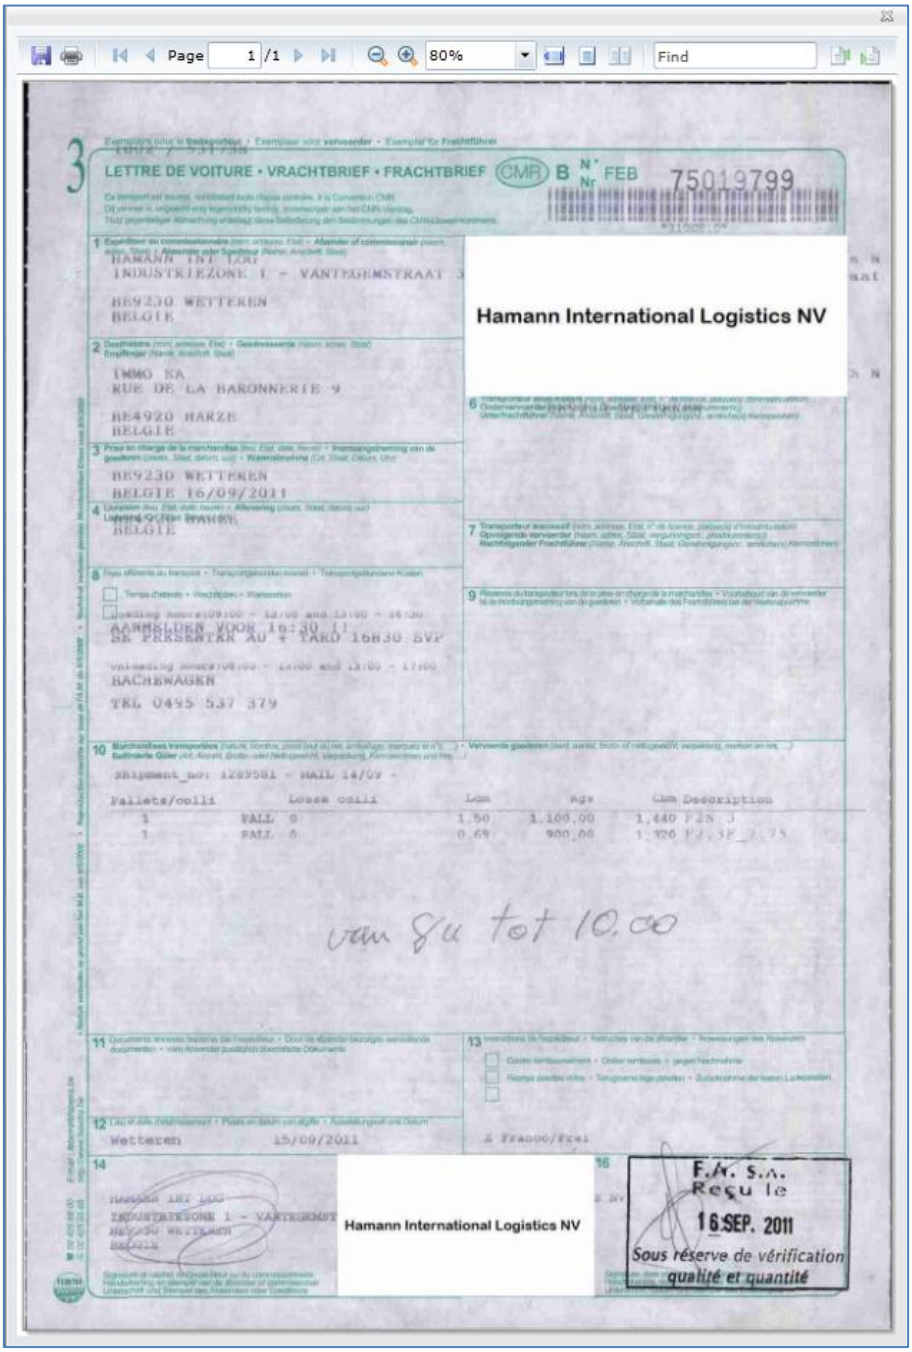


By double clicking a line, you open a detailed overview of your shipment.



In this detailed overview you can download and save cmrs and pods that have been scanned at Hamann.





You will also see a historical overview of your goods statuses.

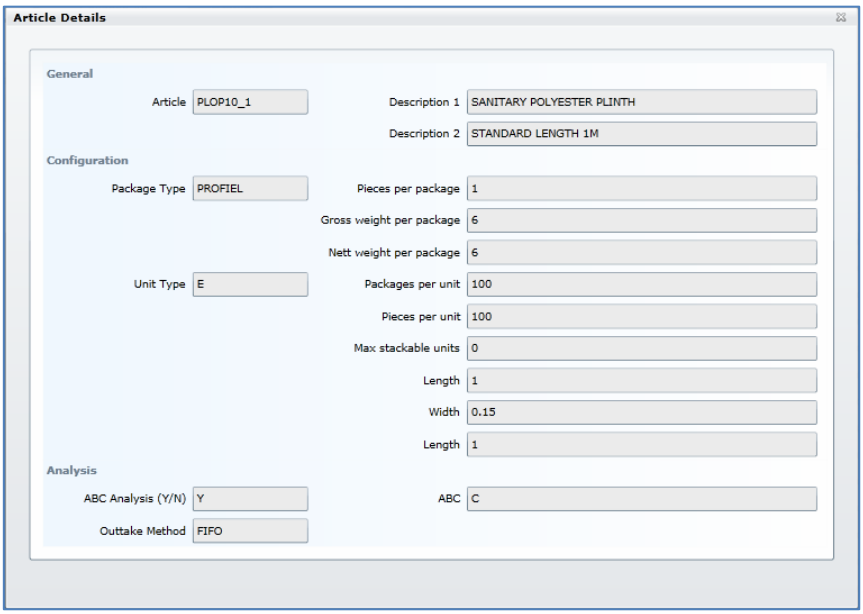
In this list you find all the article codes and descriptions of stored goods, locations in our warehouse, number per package, weight and etcetera.

By double clicking a line, you open the detailed overview of the article.



You can adjust the list by grouping and filtering, this for each column, just like you would do in an Excel file.

In the example below, goods were grouped according to the description, so you can see the grouped totals. General totals are also provided.

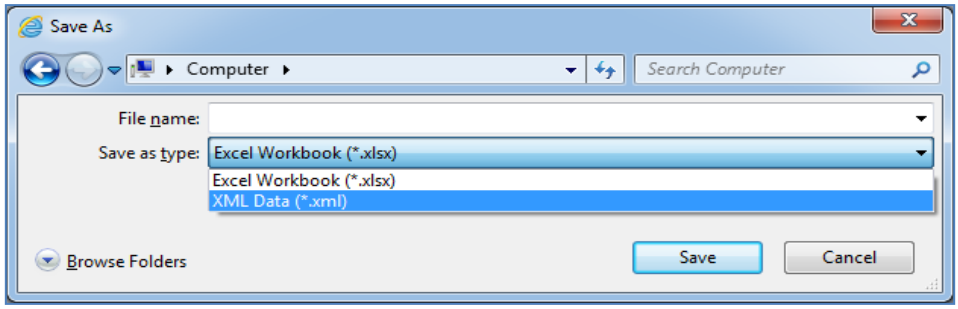
You can easily filter your stock details by filtering, sorting and grouping them so you can see immediately the details you need.

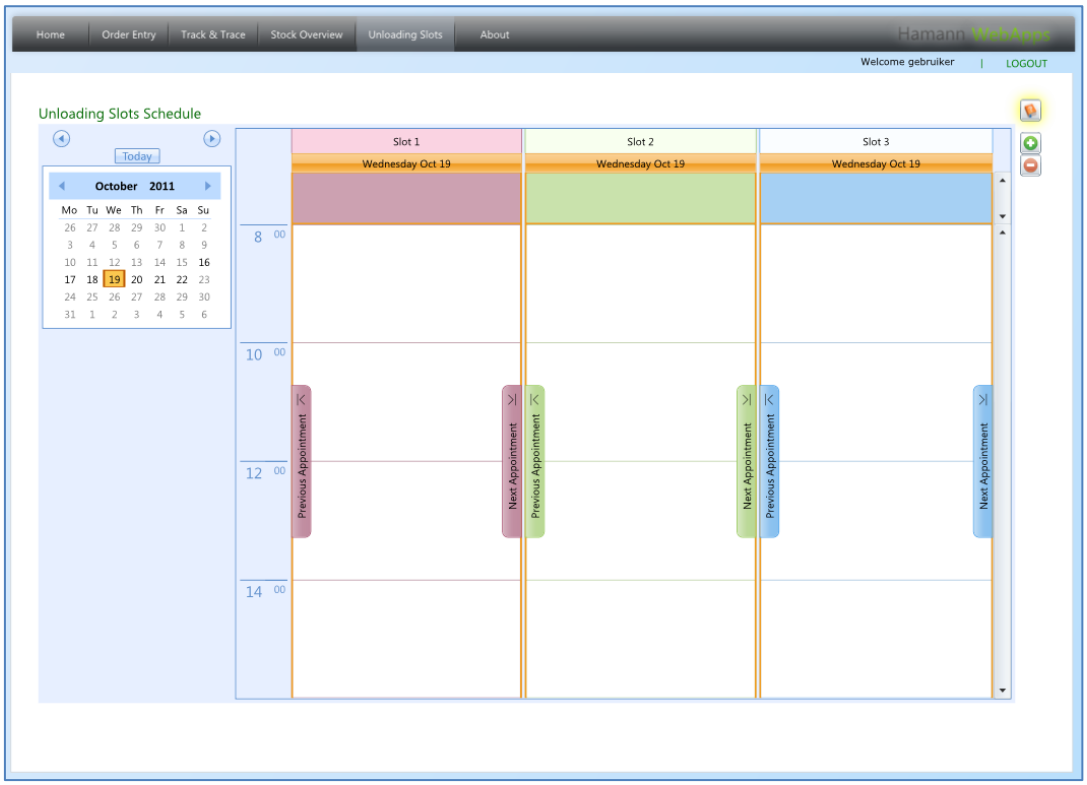
In addition, you have the possibility to export to an Excel or Xml file and import these into your own software environment.

Export to Excel/Xml

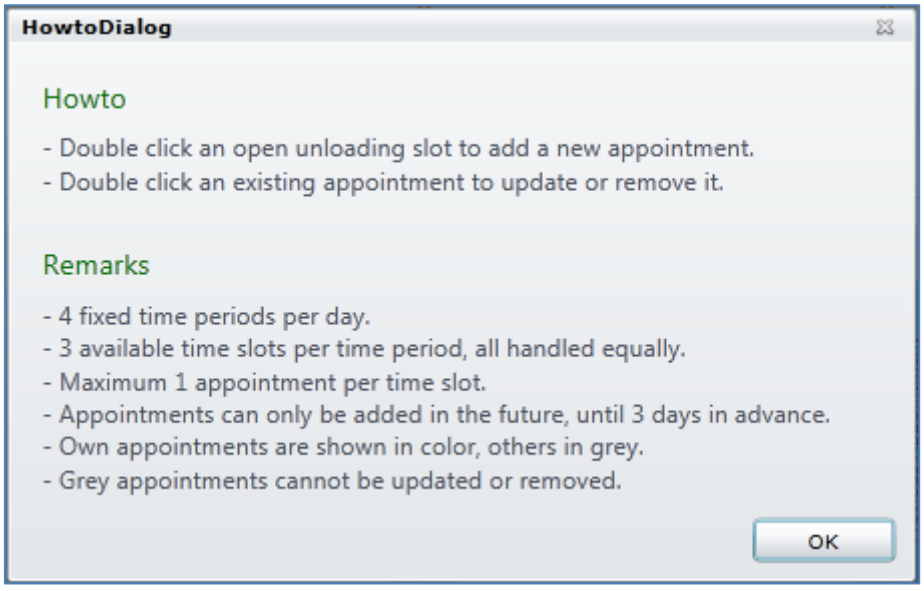


6. Unloading Slots

As an agent you can indicate when your truck will arrive at Hamann by making an online appointment. This gives us the opportunity to structure the handling of incoming trucks. A truck that was scheduled and arrives on time will be unloaded with priority.



When you don't have any appointments, an information dialogue appears.



HowtoDialog
Howto
- Double click an open unloading slot to add a new appointment.
- Double click an existing appointment to update or remove it.
Remarks
- 4 fixed time periods per day.
- 3 available time slots per time period, all handled equally.
- Maximum 1 appointment per time slot.
- Appointments can only be added in the future, until 3 days in advance.
- Own appointments are shown in color, others in grey.
- Grey appointments cannot be updated or removed.
OK

This dialogue is also shown by clicking the help button.

Show the information dialogue

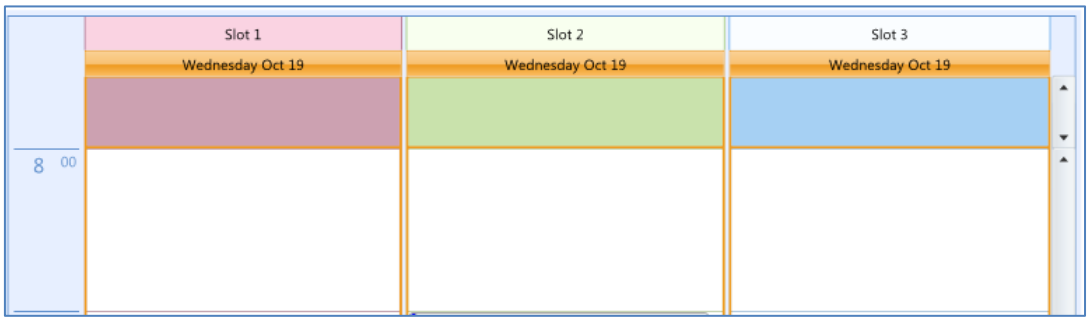
Although the principle of adding and removing is more or less the same as in other Hamann WebApps applications, certain characteristics of the functionality are briefly explained in the dialogue window. Below, you can find more detailed information concerning the most important points.

4 fixed time periods per day

There are 4 time periods; each one of them lasts 2 hours. You have to estimate when your vehicle will arrive at Hamann and so reserve a time period in which your vehicle can be unloaded with priority. The vehicle needs to be present at the start of the time period. In case it does not, the appointment expires and the vehicle is not unloaded with priority to the non scheduled vehicles.

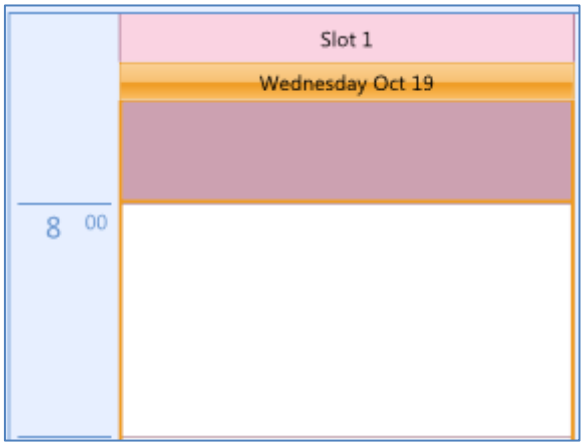
3 time slots per time period, are equally treated

We are able to unload 3 vehicles per time period with priority to the non scheduled vehicles. There is no distinction between slot 1, slot 2 or slot 3 according to priority. Actually there are simply 3 different unloading docks.



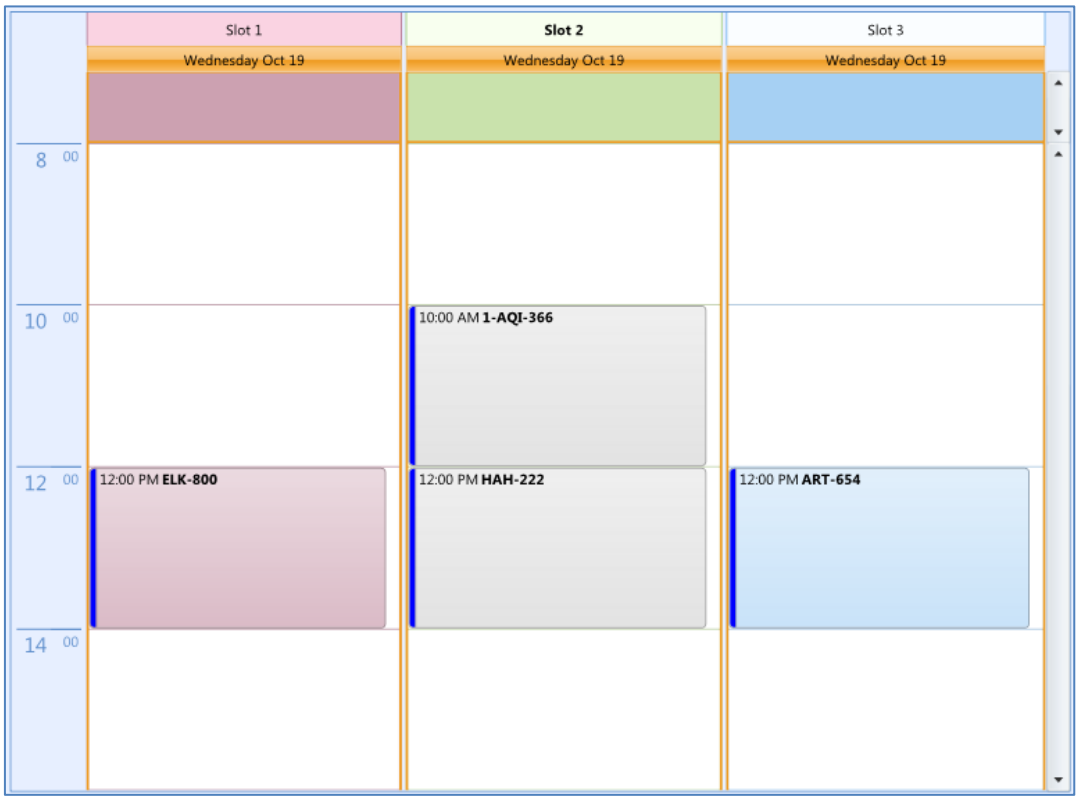
maximal 1 appointment per time slot

It is obvious that we can only unload one vehicle at a time per unloading dock, so you can only make one appointment per time period.



own appointments in color, other appointments in gray

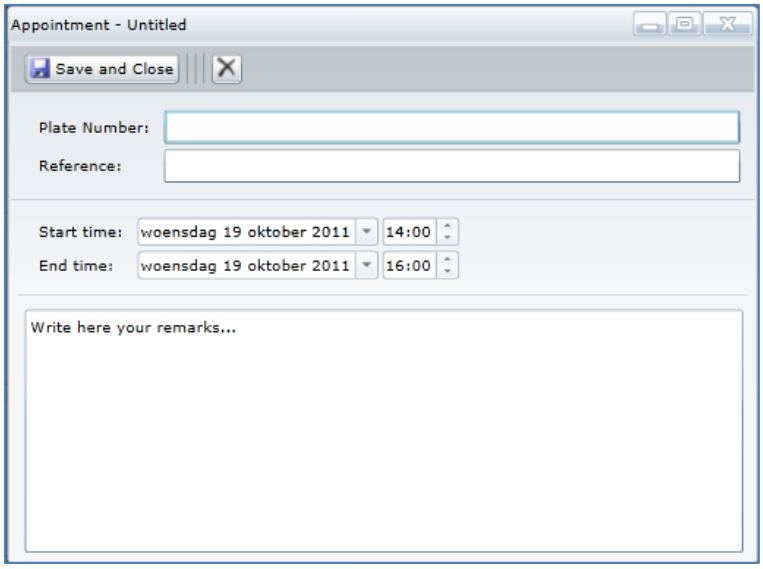
To see which time slots are still available, your own appointments as well as other appointments are shown. Own appointments take the color of the time slot, other appointments are grey.



It is possible to adjust or to remove your own appointments, as long as the time period has not been started yet. Non adjustable appointments are also shown in grey.

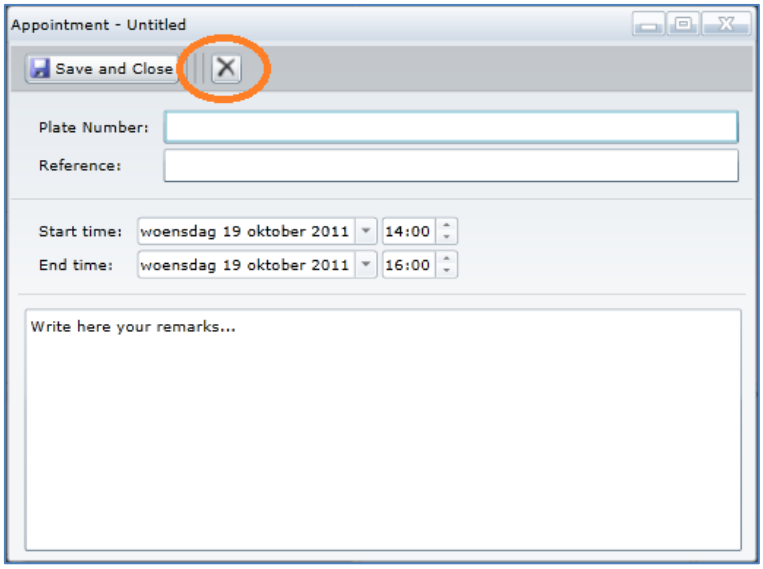
It is possible to add an appointment by double clicking an empty time slot or by selecting an empty time slot and clicking the standard add button. Be aware of the fact that appointments only can be added in a future time period, maximum 3 days in advance.

Add a new appointment



You can remove an appointment by opening it or by clicking the standard remove button. Appointments that have started already or appointments in the past cannot be removed anymore.

Remove a selected appointment



7. End

We wish you lots of success using our new Hamann WebApps. In this way, we hope to simplify the placing and the follow-up of your orders, transports and stored goods.

In case of any problem, or when something seems not clear, do not hesitate to contact us. We will help you as soon as possible.
